Women's Body Recomposition Guide

Body recomposition — losing fat while gaining muscle simultaneously — is most effective for women who are new to training, returning after a break, or in a slight caloric deficit with sufficient protein. This 16-week programme uses periodized training and nutritional cycling to achieve both goals at once.

Why Recomposition Works Differently for Women

Factor	Women	Impact on Training
Testosterone	15–70 ng/dL (vs 270–1070 in men)	Less muscle mass per cycle; slower strength gain
Oestrogen	Protective against muscle damage	Faster recovery; can train more frequently
Menstrual cycle	Hormonal fluctuations	Adjust intensity to cycle phase
Body fat distribution	Gluteofemoral (hips/thighs)	Takes longer to reduce lower body fat
Metabolism	~10% lower than males same weight	Smaller caloric adjustments needed

16-Week Training Phases

Phase	Weeks	Focus	Rep Range	Frequency
Foundation	1–4	Movement patterns, form	12–15 reps	3 days/week full body
Strength Build	5–8	Progressive overload	6–10 reps	4 days/week upper/lower
Hypertrophy	9–12	Volume + metabolic stress	10–15 reps	4–5 days/week
Peak + Deload	13–16	Max intensity + recovery	8–12 reps	4 days + 1 deload week

Menstrual Cycle Training Optimisation

Phase	Days	Hormones	Training Approach
Menstruation	1–5	Low oestrogen & progesterone	Light training, yoga, walking
Follicular	6–13	Rising oestrogen	Progressive overload, PR attempts
Ovulation	14	Peak oestrogen	Highest intensity workouts
Luteal early	15–21	Rising progesterone	Moderate intensity, strength focus
Luteal late	22–28	Falling hormones	Reduce volume, increase rest

Nutrition — Recomposition Protocol

Macro	Training Days	Rest Days	Source Examples
Calories	TDEE + 100 kcal	TDEE – 200 kcal	Small daily fluctuation
Protein	2.0 g/kg	2.0 g/kg	Paneer, chicken, eggs, Greek yogurt
Carbohydrates	3–4 g/kg	1.5–2 g/kg	Rice, oats, banana, sweet potato
Fats	1.0 g/kg	1.0 g/kg	Ghee, nuts, avocado, fish
Fibre	25–30 g/day	25–30 g/day	Vegetables, legumes, oats

Sample Weekly Workout Plan

Day	Session	Key Exercises	Duration
Mon	Lower Body Strength	Squat, RDL, hip thrust, leg curl	50 min
Tue	Upper Body Push	DB press, shoulder press, lateral raise	45 min
Wed	Active Recovery	Yoga, walking, mobility	30 min
Thu	Lower Body Hypertrophy	Bulgarian split squat, cable kickback	55 min
Fri	Upper Body Pull	Pull-ups, cable row, face pulls, bicep curl	45 min
Sat	Full Body HIIT	Circuits: goblet squat, KB swing, push-up	35 min
Sun	Rest	Stretching, foam rolling	20 min

Supplement Stack for Women

Supplement	Dose	Timing	Benefit
Whey Protein	25–30 g	Post-workout	Muscle protein synthesis
Creatine Monohydrate	3–5 g/day	Any time (consistent)	Strength, muscle fullness
Iron	18 mg	With vitamin C	Menstrual iron loss replacement
Vitamin D3 + K2	2000–5000 IU	Morning with fat	Bone health, hormones
Magnesium Glycinate	200–400 mg	Before bed	Sleep, muscle relaxation, PMS
Collagen Peptides	10–15 g	Post-workout	Joint health, skin elasticity
Omega-3	2–3 g EPA+DHA	With meal	Inflammation, mood, fat loss
